

High-performance, fully safe mixing station complete with pneumatic support and positioning elevator (for tanks/ecobulks 640-1240 liters)

312030D-EM16Ex

↑ Detail of complete elevation module control unit
310741-02xx

- Extremely versatile and safe mixing station suitable for mixing fluid products in closed ecobulk-type tanks.
- The mixer is equipped with an expandable rotating propeller and allows the closed core to pass through the top cap.
- The specialized geometry of the propeller allows for high efficiency in mixing the entire contents of the tank.
- Extremely robust construction of the lifting module for any intermediate mixing steps and to make medium-high viscosity process fluids perfectly homogeneous.
- CE station with maximum safety features as standard for use and activation only when the tank is present.

High-performance, fully safe mixing station complete with pneumatic support and positioning elevator (for tanks/ecobulks 640-1240 liters)

312030D-EM16Ex

Optional

- Minimum level detector (non-contact) and alarm
- Suction equipment with integrated pump and filters in mixer
- Atex equipment version
- Special steel version for food industry
- Wheeled transport trolley for positioning small tank

Essential equipment features

→ Product contact material	AISI 316 stainless steel
→ Tank sizes to be treated	640 - 1240 liters
→ Top inlet	DN 150 - DN 225
→ Control panel	Selectable speed inverter
→ Mixing fluids	Polyurethanes - water/solvent-based coatings - primers - reactives - protective coatings - release agents.
